

greenEvolution

curve

The design variant with
emphatically round contours.

Minimalist style inspired
by the Mediterranean

Outstanding insulation values
for reduced energy consumption

Versatile, weather-
resistant surfaces

Windows are always individual and a value driver

Windows make up just a small percentage of the construction costs yet have a major impact on the home:

- Windows which match the style of the building give the home a face and increase the value of the property.
- Daylight enhances the ambiance in the home and has a positive effect on physical and mental well-being.
- The energy input of well-insulated windows has the same effect as a heating system.
- Between 25 and 50 % of heating costs and the associated CO₂ pollution can be reduced thanks to modern windows.
- Windows ensure optimized control of the indoor climate.
- The right windows can slash the risk of burglary by 80 %.
- Noise pollution from the outside can be reduced by up to 75 % in urban regions with suitable windows.

The site, building and residents are all unique. Therefore, there is no such thing as a perfect standard window solution to suit all demands. Price as the sole decision-making criterion does not go far enough. Windows must be configured to the specific requirements in order to become "myWindows".

The Salamander C3 principle: The route to optimum window configuration

You can use our specially developed procedure to find the window that meets your standards. These three dimensions essentially determine whether your choice of window matches the building and external influences:

Climate

Climate conditions and local factors

Temperature curve and difference, rainfall, hours of sunshine, snowfall, wind loads, burglary rates, air pollution, noise pollution, meters above sea level.

Case

Building properties

Year in which the building was constructed, living space, storeys, window frame material, glazing, alignment of the building as per GPS coordinates, number of windows per façade, window types, number of cross bars, window dimensions, analysis of light situation: Comparison of actual and desired light situation.

Client

Customer demands

Strategies to optimize light and energy input, historical authenticity, regional style, individual selection of the design and materiality, ecological factors such as insulation and recycling as well as costs.

Climate

curve offers optimized insulation values with a heat transfer coefficient of up to $1.0 \text{ W}/(\text{m}^2\text{K})$ and thus meets all energy requirements expected from a modern versatile window. Therefore, it is ideally suited for places where winters are cold.

Because of its weather resistance, curve brings Mediterranean flair to all climate zones.

Case

Architectural style/window type
The emphatically round cross-section of the profile matches Mediterranean-inspired architectural styles and gives the window a homogeneous appearance.

curve is ideal for standard windows with aesthetic demands: in renovations and new builds.

Structural analysis
Window sizes of up to 2.60 m can be fitted with the standard sash. The structural design enables floor-to-ceiling window solutions.

Insulation
Owing to optimized insulation values, curve can significantly improve the energy balance on the north side of a building. On the building's south side, the structural design facilitates large floor-to-ceiling elements and thus optimizes the input of light and energy.

Client

Sound protection
With a glass thickness of up to 48 mm, sound-proofing of up to 47 dB can be achieved.

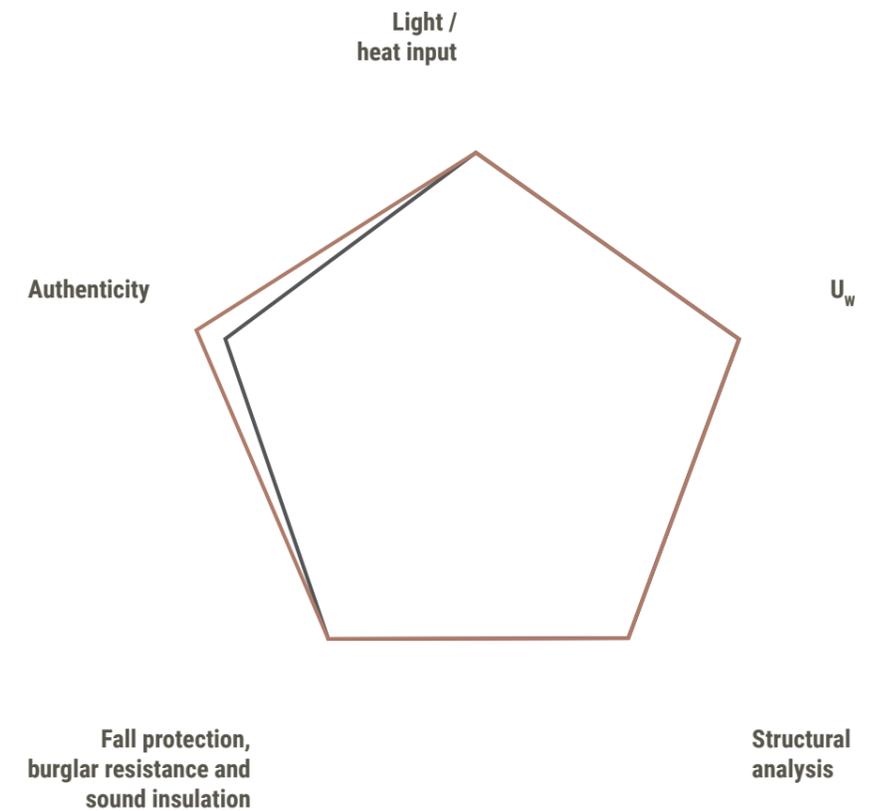

Burglar resistant
With curve burglary protection of up to RC3 can be ensured via standard measures.

Surfaces
Salamander White, alternatively, the basic body is also available in anthracite, cream, brown and caramel, over 40 standard film decors.

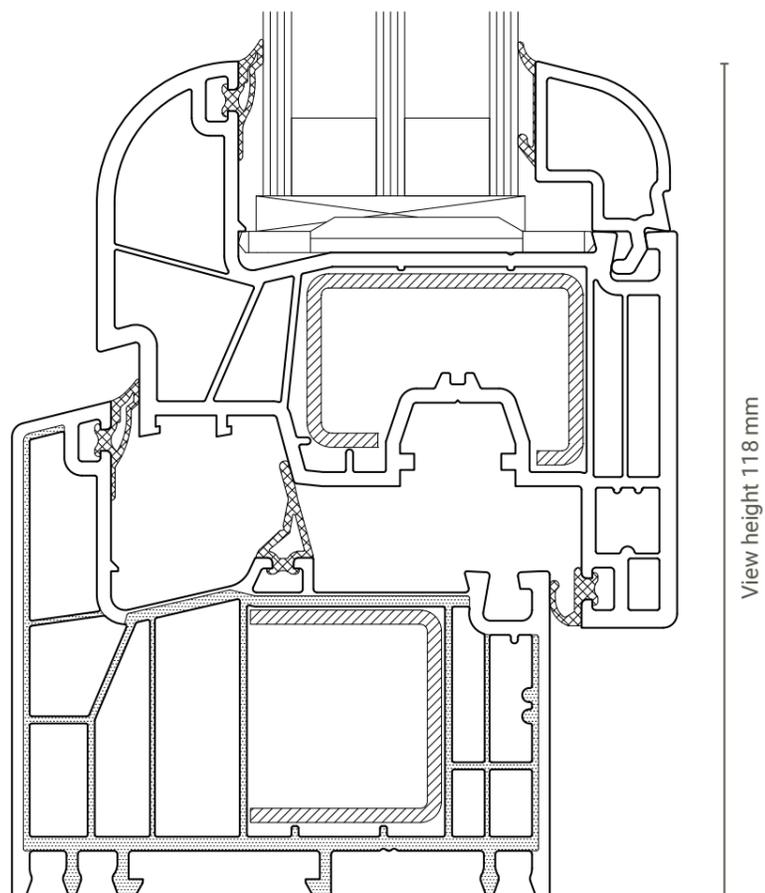

Mediterranean flair with maximum functionality

Compared to our all-rounder:

The most important values at a glance

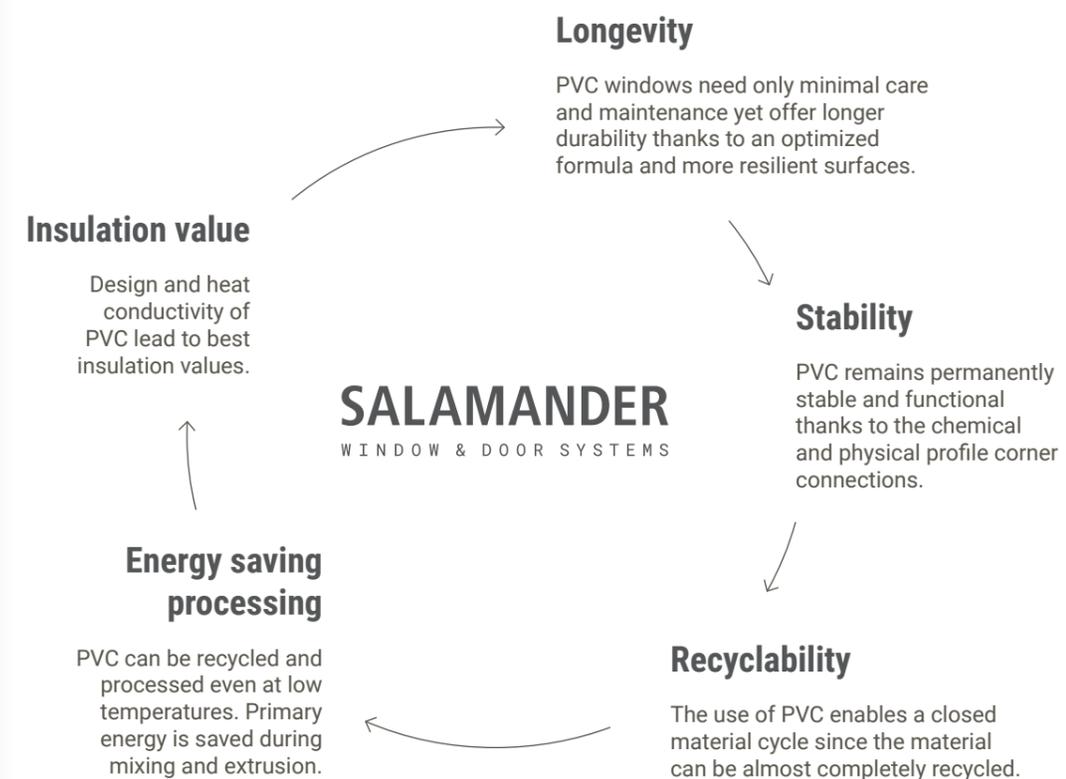

Thermal insulation	AD U_w up to 0.77 W/(m ² K) MD U_w up to 0.73 W/(m ² K)	AD U_f up to 1.1 W/(m ² K) MD U_f up to 1.0 W/(m ² K)
Sound proof	47 dB	
Safety	up to RC3	
Construction depth	76 mm	
Sash view height	48 mm	
Frame view height	70 mm	
Maximum sizes	Standard sash: Width up to max. 1,500 mm Height up to max. 2,600 mm	Side entrance door: Width up to max. 1,000 mm Height up to max. 2,200 mm
Types of opening	Side-hung window, bottom hung window, and tilt and turn window, side entrance or parallel slide & tilt door	

Subject to changes, errors, printing and type setting mistakes.

The ideal, most sustainable window material – PVC

We specialize in the production of window profiles using the sustainable and long-lasting material PVC and combine this with our innovative realMaterial surfaces. This enables us to create customized windows which not only suit the style of the building, but also bring it to life – on the outside and inside.

Our production facilities are powered by an ever increasing percentage of green electricity from renewable sources and our own water power plant.

SALAMANDER

WINDOW & DOOR SYSTEMS

We have the perfect window to suit your needs –

thanks to our decades of experience in profile development and PVC extrusion. Long-lasting, customizable and sustainable from the word go: We are continuously developing our systems to offer you the perfect window for the future today.
